

STEAM DO'S AND DON'TS

COURSE OVERVIEW

This course will bring you from the burner tip to the air valve covering the mistakes most commonly made by heating technicians. Steam may be considered something of the past but there are a lot of systems still in operation. With today's economic hardships, many are not likely to go away.

The boiler piping and air control is crucial to the proper operation and energy use of the steam system. During this course we will go inside the system and learn about proper maintenance practices and what happens if you don't do them. Learn the correct way to replace a steam boiler and save yourself the costly mistakes most often made.

The materials for this course are written by **Dan Hollahan**. You will receive copies of his well known book titled "*The Lost Art of Steam Heat*" and the troubleshooting guide "*A Pocket Full of Steam*".

There will also be information from companies such as *Weil McLain*, *Bell and Gosset*, *Hoffman* and *Macdonald Miller*.

The concepts learned in this course will allow you to repair or replace steam systems with confidence, save yourself headaches and help you expand your customer base.
